

# WHO WE ARE

Lugo de Llanera Primary school opened in 1975 with the aim of providing early years foundation stage (ages 3-5) and primary education (ages 6-11) to all the children from the small town of Lugo de Llanera as well as the villages around. It is a state-funded educational institution depending entirely from the Education and Culture Administration of the Government of the Principality of Asturias.

It is a fairly large co-educational school with around 500 students supported by 44 staff.

We've got a vibrant and strong learning community where children thrive. We encourage our students to fully develop all their personal skills, organizing and planning projects, activities, environment and materials to achieve it.

# CP LUGO DE LLANERA

## LUGO DE LLANERA PRIMARY SCHOOL

Open to international and cross-cultural projects  
Open to new ideas and inspired visions from our colleagues in Europe

## WHY WE WANT TO PARTICIPATE IN ERASMUS+

Our main strategic goals are to internationalize our school and to learn from new school systems which let us widen and improve our teaching and learning approach. For that reason we are initiating a KA1 mobility Project framed on Erasmus+.

## WHAT WE OFFER

As part of our internationalization project we provide opportunities to participate and implement European cooperation projects, as well as to host professionals willing to do job-shadowing of our educative system.

## OUR BACKGROUND

We started participating in European Programs in 2008. Since then we have been an active part in two interesting Comenius Projects during four years. We have also hosted different Language assistants from Bulgaria, Poland, Germany and Ireland, who have been a key part in our school life, and who have facilitated an intercultural learning process.

Besides this, we have occasionally hosted other American professionals who have made significant contributions to our daily routines.

## WHAT WE LOOK FOR

The policy of our school is to improve the relationships of the educative community, our environment and an open communication based on respect for diversity. We have ongoing projects to help all our pupils to feel integrated in the society and offset the social differences by converging all the programmes we develop.

We try to apply inclusive teaching taking into account the multiple learning styles of our students, besides an inclusive structure of support to students with difficulties. We promote reading skills, using the library as the thrust to fulfill it. We also apply CLIL teaching, using English language to teach Natural Science. ICT project is especially addressed to develop computer competences in this field of knowledge. We incorporate these competences to the learning of curricular subjects. We try to extend our action line to improve our physical and social environment. Knowing other cultures helps us, pupils, families and teachers, to respect diversity.
